The article discusses the conversion between megawatt-hours (MWh) and kilowatt-hours (kWh) in the context of electrical power systems, particularly in the realm of solar energy.

This calculator multiplies the power value (in MW) by the time value (in hours) and then converts the result to kilowatt-hours by multiplying by 1000, as 1 MW = 1000 kWh.

On average, a household consumes about 1 to 2 kWh of electricity per hour. Therefore, 1 MWh can supply electricity to approximately 500 to 1,000 households for one hour.
