

Solar glass is a type of glass that is specially designed to harness solar energy and convert it into electricity. It is made by incorporating photovoltaic cells into the glass, allowing it to generate power from sunlight. This innovative technology has gained popularity in recent years as a sustainable and efficient way to produce clean energy.

With global attention on environmental protection and energy efficiency steadily rising, the demand for solar photovoltaic glass in both commercial and residential construction sectors has significantly increased. The desire to reduce energy costs and carbon footprint has driven the widespread adoption of solar photovoltaic glass.

This article explores the classification and applications of solar photovoltaic glass. Photovoltaic glass substrates used in solar cells typically include ultra-thin glass, surface-coated glass, and low-iron (extra-clear) glass.

Photovoltaic glass,also known as solar glass or transparent solar panels,is a type of smart glass that uses embedded photovoltaic cells to convert sunlight into electricity to generate electricity.

Despite the abundance of solar radiation, significant energy losses occur due to scattering, reflection, and thermal dissipation. Glass mitigates these losses by functioning as a protective layer, optical enhancer, and spectral converter within PV cells.

The company is a prominent player in the photovoltaic glass market, offering ultra-clear rolled glass and TCO glass essential for solar energy applications. ACHT's advanced technology, R&D system, and extensive corporate culture have solidified its position as a top photovoltaic glass manufacturer.
